

MARCH 2026

HALLOR

ELECTRIFYING GLOBAL AVIATION GROUND SUPPORT EQUIPMENT

Canadian-Built | Zero Emissions | Public Markets-Ready

DISCLAIMER

Certain information set forth in this presentation contains “forward-looking information”, including “future-oriented financial information” and “financial outlook”, under applicable securities laws (collectively referred to herein as forward-looking statements). Except for statements of historical fact, the information contained herein constitutes forward-looking statements and includes, but is not limited to, the (i) projected financial performance of the Company; (ii) completion of, and the use of proceeds from, the sale of the shares being offered hereunder; (iii) the expected development of the Company’s business, projects, and joint ventures; (iv) execution of the Company’s vision and growth strategy, including with respect to future M&A activity and global growth; (v) sources and availability of third-party financing for the Company’s projects; (vi) completion of the Company’s projects that are currently underway, in development or otherwise under consideration; (vi) renewal of the Company’s current customer, supplier and other material agreements; and (vii) future liquidity, working capital, and capital requirements. Forward-looking statements are provided to allow potential investors the opportunity to understand management’s beliefs and opinions in respect of the future so that they may use such beliefs and opinions as one factor in evaluating an investment.

These statements are not guarantees of future performance and undue reliance should not be placed on them. Such forward-looking statements necessarily involve known and unknown risks and uncertainties, which may cause actual performance and financial results in future periods to differ materially from any projections of future performance or result expressed or implied by such forward-looking statements. Although forward-looking statements contained in this presentation are based upon what management of the Company believes are reasonable assumptions, there can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. The Company undertakes no obligation to update forward-looking statements if circumstances or management’s estimates or opinions should change except as required by applicable securities laws. The reader is cautioned not to place undue reliance on forward-looking statements.

HALLOR'S MISSION:

**TO ACCELERATE THE
WORLD'S TRANSITION TO
SUSTAINABLE ENERGY BY
BUILDING ELECTRIC
GROUND SUPPORT
EQUIPMENT (EGSE)
DESIGNED TO REPLACE
SOME OF THE PLANET'S
BIGGEST POLLUTERS—
WHILE PRIORITIZING
SAFETY, OPERATIONAL
EFFICIENCY, AND
LOWERING OPEX.**

AVIATION GROUND SUPPORT EQUIPMENT IS STUCK IN THE PAST

The global aviation industry moves millions of passengers daily, yet the equipment moving their luggage remains trapped in decades-old technology. Internal combustion engines [“ICE”]—i.e. gas and diesel-powered ground support equipment—dominates airport tarmacs worldwide, creating operational inefficiencies that airports can no longer ignore.

THE GAS/DIESEL DEPENDENCY CREATES CASCADING PROBLEMS

ENVIRONMENTAL CRISIS: HIGH EMISSIONS DIRECTLY CONTRADICT AIRPORT NET-ZERO COMMITMENTS AND REGULATORY MANDATES

OPERATIONAL EXPENSE BURDEN: FUEL COSTS, MAINTENANCE COMPLEXITY, AND UNPREDICTABLE GAS/DIESEL PRICING STRAIN AIRPORT BUDGETS

SAFETY CONCERNS: OUTDATED DESIGNS WITH HIGH CENTERS OF GRAVITY AND POOR ERGONOMICS INCREASE WORKPLACE INCIDENTS

DESIGN STAGNATION: CORE GSE ARCHITECTURE HASN'T FUNDAMENTALLY EVOLVED IN OVER 40 YEARS

As airports face mounting pressure from carbon taxes, ESG requirements, and stakeholder expectations, the economic and regulatory case for transformation has never been stronger.

The question is no longer IF airports will electrify—it's WHO will lead the transition.

LEGACY OEMS CAN'T PIVOT FAST ENOUGH

The competitive landscape favors purpose-built electric platforms over established ICE manufacturers attempting retrofits. Legacy GSE suppliers face fundamental constraints that create meaningful barriers to electric transition.

WHY INCUMBENTS FAIL:

- **Diesel-first engineering legacy:** Decades of design optimization for internal combustion engines creates technical debt that prevents clean-sheet electric development
- **Organizational inertia:** Large companies with established ICE production lines face internal resistance to cannibalizing existing revenue streams
- **Extended lead times:** Traditional OEMs require 18-36 months for custom orders, while airports need immediate deployment to meet deadlines
- **Retrofit compromises:** Converting ICE frames to electric results in suboptimal weight distribution, reduced battery capacity, and compromised performance
- **No modular platform:** Each equipment type requires separate development, tooling, and supply chain, preventing economies of scale
- **Proprietary lock-in models:** Legacy players rely on captive service revenue, creating total-cost-of-ownership disadvantages

Hallor's Green Dx™ side by side with a Tiger TC-50 at BC Ferries

A ONCE-IN-A-GENERATION INFRASTRUCTURE TRANSITION

Three converging forces are creating an unprecedented market opportunity for electric ground support equipment. This isn't a gradual shift—it's a forced replacement cycle accelerating across every major aviation market globally.

GLOBAL ELECTRIFICATION MANDATES	CARBON TAXES DESTROYING DIESEL ECONOMICS	LABOUR SHORTAGES DEMAND SAFER EQUIPMENT
Airports worldwide face binding net-zero commitments. EU airports must achieve carbon neutrality by 2030. North American hubs are implementing strict emissions regulations. These aren't aspirational goals—they're enforceable deadlines with financial penalties.	Carbon pricing mechanisms are rapidly making diesel GSE economically unviable. Fuel costs continue rising while carbon taxes add 20-40% to operational expenses. The total cost of ownership equation has fundamentally shifted in favor of electric alternatives.	Aviation ground crews face chronic staffing challenges. Modern electric GSE with superior ergonomics, reduced physical strain, and safer operation reduces turnover and attracts younger workers who expect climate-conscious employers.

The convergence of regulatory pressure, economic reality, and workforce dynamics creates perfect conditions for market disruption. Airports aren't choosing between ICE and electric—they're choosing which electric provider will power their future.

MEET THE GREEN OX™ ELECTRIC GSE PLATFORM

HALLOR

These three converging forces are creating an unprecedented market opportunity for electric ground support equipment. This isn't a gradual shift—it's a forced replacement cycle accelerating across every major aviation market globally.

Core Platform Advantages:

- **Fully electric architecture:** Every system designed specifically for battery-electric operation, not adapted from ICE heritage
- **Modular design philosophy:** Single chassis platform supports multiple configurations—baggage tractors, belt loaders, pushback tugs, cargo carts
- **Extreme-climate validation:** Proven performance from +50°C desert heat to -47°C northern cold, where competitors fail
- **Built for scale:** Manufacturing processes designed for volume production and global distribution
- **Safety-first engineering:** Lowest center of gravity in class, superior stability, reduced operator fatigue
- **Maximum uptime:** Simplified maintenance, automotive-grade components, no proprietary lock-ins

Green Ox™ delivers what airports need most: reliable, safe, cost-effective electric GSE that works in real-world conditions, not just controlled test environments.

WORLD'S MOST ADVANCED ELECTRIC BAGGAGE TRACTOR

DESIGNED FROM THE GROUND UP FOR SAFETY, UPTIME, AND TOTAL COST SUPERIORITY

PURPOSE-BUILT EV PLATFORM

Unlike competitors retrofitting diesel frames, Green Ox was engineered electric-first. Every component—from chassis geometry to power distribution—optimized specifically for battery-electric operation in demanding airport environments.

BEST-IN-CLASS SAFETY

Green Ox™ features the lowest center of gravity in its category, making difficult to tip. This isn't administrative safety theater—it's fundamental physics delivering engineered protection for operators and ground crews.

EXTREME CLIMATE PERFORMANCE

Operates reliably from +50°C to -47°C. Cold-weather proven in conditions where competitors experience battery failures and reduced performance. Pending NASA validation to -50°C for Arctic airport operations.

UNMATCHED MODULARITY

Single chassis platform supports baggage tractors, belt loaders, pushback tugs, and cargo carts with 75%+ component commonality. Dramatically reduces spare parts inventory, training complexity, and maintenance overhead.

RIGHT-TO-REPAIR ECONOMICS

Built with automotive-grade parts, not proprietary components requiring expensive OEM service contracts. Standard tools, faster repairs, predictable costs. Airports maintain control of their fleet economics.

80% LOWER ANNUAL OPEX

ICE GSE typically costs ~\$30,000 annually in fuel and maintenance. Green Ox reduces this to ~\$6,000 with predictable electricity costs, fewer moving parts, and simplified service requirements.

WHY WE'RE AHEAD IN THE MARKET

The Green Ox™ doesn't just match ICE performance, it fundamentally redefines what GSE should deliver. Our engineering choices create compounding advantages that competitors cannot easily replicate.

1

OPERATOR-FIRST DESIGN

Anti-fatigue ergonomics, intuitive controls, and superior visibility reduce operator strain and training time. Easier-to-drive equipment means lower staff turnover and faster onboarding—critical advantages in today's tight labour market.

2

AWD / FWD SUPERIORITY

Front-wheel drive standard with optional all-wheel drive configuration provides superior traction on ice, snow, wet surfaces, and ramp inclines. Competitive rear-wheel-drive designs struggle in winter conditions common at northern airports.

3

READY FOR THE FUTURE

Telematics and fleet management software roadmap built into platform architecture. Real-time diagnostics, predictive maintenance alerts, carbon tracking, and ESG reporting capabilities prepare airports for tomorrow's operational requirements.

4

CHARGING INFRASTRUCTURE AGNOSTIC

Compatible with standard industrial charging systems—no proprietary infrastructure lock-in. Airports can leverage existing electrical infrastructure investments and choose their preferred charging solutions.

BUILT IN CANADA. EXPORTED TO THE WORLD.

Hallor's Canadian manufacturing base delivers strategic advantages that extend far beyond production. Our "Built in Canada" positioning unlocks procurement preferences, tariff protections, and alignment with government clean-tech initiatives across multiple markets.

STRATEGIC MANUFACTURING ADVANTAGES:

- **Canadian supply chain resilience:** Reduced exposure to international logistics disruptions and geopolitical trade tensions
- **Tariff-protected market access:** USMCA and Commonwealth trade agreements provide preferential access to key aviation markets
- **ESG procurement alignment:** Airports increasingly prioritize suppliers with verified sustainable manufacturing and supply chain transparency
- **Government support ecosystem:** Access to Canadian cleantech grants, export development programs, and infrastructure investment incentives
- **Quality assurance credibility:** Canadian manufacturing standards signal reliability to institutional buyers and procurement officers

AS GLOBAL SUPPLY CHAINS
FACE ONGOING UNCERTAINTY,
AIRPORTS VALUE SUPPLIERS
WITH STABLE, TRANSPARENT,
DOMESTICALLY-ANCHORED
PRODUCTION CAPABILITIES.

OUR CANADIAN BASE IS A
COMPETITIVE MOAT, NOT JUST
A LOCATION.

A MASSIVE, FORCED-REPLACEMENT MARKET

The global GSE market isn't growing through incremental adoption, it's undergoing wholesale forced replacement. Over one million gas/diesel GSE units worldwide must be retired and replaced within the next decade to meet regulatory mandates. This creates a time-bound, non-discretionary capital expenditure cycle of unprecedented scale.

\$13.3B+

Global GSE TAM

Total addressable market across all equipment categories, replacement cycles, and geographic regions through 2031

1M+

Legacy ICE Units

Gas/Diesel GSE units operating globally that must be replaced to meet airport net-zero commitments and regulatory deadlines

2030

Critical Deadline

Target year for major airport carbon-neutrality mandates, accelerating procurement timelines and creating urgency

15-20%

Annual Growth Rate

Electric GSE market CAGR as airports transition from ICE, with acceleration expected through 2028

Unlike speculative emerging markets, this opportunity is backed by binding regulatory requirements, allocated capital budgets, and operational necessity. Airports aren't debating whether to electrify—they're selecting vendors and scheduling deployments. The window for market leadership is now.

PROVEN. DEPLOYED. REVENUE-GENERATING

Hallor isn't a concept-stage company with prototypes and promises. We've achieved Technology Readiness Level 9 (TRL-9)—full commercial deployment in operational environments. The Green Ox™ is generating revenue today in live airport operations under real-world conditions.

COMMERCIAL TRACTION MILESTONES:

- **TRL-9 validation:** Units operating daily in commercial airport environments, not test facilities
- **\$25M+ qualified pipeline:** Active discussions with Tier-1 airports and ground handlers across North America and Europe
- **Tier-1 manufacturing LOIs:** Letters of intent with established production partners for scalable manufacturing capacity
- **Multi-unit fleet orders:** Initial deployments transitioning to larger fleet commitments as performance data validates business case
- **Reference customer validation:** Early adopters becoming advocates, providing testimonials and hosting site visits for prospective buyers

The hardest part of hardware commercialization—proving the product works at scale in demanding real-world conditions—is complete. We're now executing on distribution, manufacturing partnerships, and market expansion.

DE-RISKED INVESTMENT

UNLIKE EARLY-STAGE HARDWARE VENTURES, HALLOR HAS OPERATIONAL PROOF, REVENUE TRACTION, AND MANUFACTURING PARTNERSHIPS IN PLACE, SIGNIFICANTLY REDUCING TECHNOLOGY AND MARKET RISK FOR INVESTORS.

HARDWARE TODAY. PLATFORM TOMORROW.

Hallor's business model evolves from equipment sales to a comprehensive platform generating recurring revenue streams. We're building the infrastructure layer for airport electrification, not just selling tractors.

GSE UNIT SALES

Core revenue from electric baggage tractors, belt loaders, pushback tugs, and cargo handling equipment. Direct sales to airports and ground handlers, plus fleet financing partnerships.

CONVERSION KITS

Retrofit solutions for newer ICE equipment not yet at end-of-life. Allows airports to electrify existing fleets faster while preserving recent capital investments. Expands addressable market significantly.

SAAS FLEET & CARBON ANALYTICS

Subscription software for fleet management, predictive maintenance, energy optimization, and ESG reporting. Recurring revenue with high margins and deep customer lock-in through data network effects.

As Hallor's installed base grows, platform revenue becomes increasingly valuable. Fleet management software with telematics data creates switching costs, while carbon analytics become essential for airport ESG compliance. We're not just replacing diesel tractors—we're becoming mission-critical infrastructure for airport operations.

ACQUIRE. ELECTRIFY. SCALE.

Hallor's M&A strategy transforms the company from a single-product manufacturer into a diversified electric GSE platform through strategic acquisitions of gas/diesel OEMs, complementary technology, and distribution networks.

PROCESS 1: ICE GSE OEM ROLL-UPS	PROCESS 2: SOFTWARE & CHARGING PLATFORMS	PROCESS 3: SHARE-BASED ACCRETIVE GROWTH
Acquire established ICE equipment manufacturers with customer relationships, distribution networks, and manufacturing facilities. Immediately electrify product lines using the Green Ox™ platform, converting stranded ICE assets into electric revenue streams.	Target fleet management software, telematics platforms, and charging infrastructure companies serving aviation or industrial markets. Accelerates our platform evolution and adds high-margin recurring revenue.	Leverage public company stock as acquisition currency, preserving cash for operations while allowing seller participation in upside. Targets undervalued diesel businesses whose owners recognize electrification inevitability.

The ICE GSE industry remains highly fragmented, with dozens of small-to-mid-size manufacturers facing existential electrification threats. Many lack capital and technical expertise to transition independently, creating acquisition opportunities at attractive valuations. Hallor can acquire for manufacturing capacity and customer relationships, then immediately uplift value by electrifying product lines.

M&A THESIS: BUY ICE BUSINESSES AT DISTRESSED VALUATIONS, CONVERT TO ELECTRIC USING GREEN OX™ PLATFORM, REALIZE IMMEDIATE MARGIN IMPROVEMENT AND ESG-DRIVEN DEMAND PREMIUM. CLASSIC INDUSTRIAL ROLL-UP MODEL APPLIED TO FORCED TECHNOLOGY TRANSITION.

CLEAR LINE TO PROFITABILITY AND SCALE

Hallor's financial trajectory reflects the forced-replacement dynamics of the airport electrification cycle. Our revenue projections are grounded in qualified pipeline, manufacturing capacity commitments, and realistic market penetration assumptions.

REVENUE GROWTH DRIVERS:

- Expanding manufacturing capacity through partner LOIs
- Fleet orders transitioning from initial pilots to full deployment
- Geographic expansion into EU and Asia-Pacific markets
- Product line diversification beyond baggage tractors
- Conversion kit sales supplementing new equipment revenue

PATH TO PROFITABILITY:

- Gross margins improving as production volume scales
- Operating leverage from platform manufacturing efficiency
- SaaS revenue contribution with 80%+ gross margins
- Strategic M&A adding accretive revenue and manufacturing assets

UNLIKE TYPICAL HARDWARE COMPANIES WITH LONG PATHS TO PROFITABILITY, HALLOR BENEFITS FROM HIGH-VALUE EQUIPMENT SALES, FAVOURABLE UNIT ECONOMICS, AND A MARKET TRANSITION THAT'S ACCELERATING RATHER THAN REQUIRING DEMAND CREATION. WE'RE SCALING INTO PULL DEMAND, NOT PUSHING PRODUCT INTO UNCERTAIN MARKETS.

TSX-V TODAY. NASDAQ TOMORROW.

Hallor's public markets strategy positions the company for institutional capital access while maintaining operational focus and execution discipline. We're following a proven path from Canadian listings to U.S. exchange graduation.

Q2 2026: TSX-V LISTING

Capital Pool Company (CPC) Reverse Takeover on Toronto Venture Exchange. Establishes public currency for M&A and provides Canadian investor access to early-stage opportunity.

Q2 2026: CONCURRENT FINANCING

\$5M private placement concurrent with RTO. Capital deployed to manufacturing scale-up, working capital for large orders, and initial M&A execution.

2026-2027: REVENUE SCALE & PROFITABILITY

Execute on \$25M+ pipeline, achieve manufacturing scale, and demonstrate path to sustained profitability. Build institutional investor relationships and analyst coverage.

2028: NASDAQ UPLIST

Graduate to Nasdaq Capital Market upon meeting financial and operational thresholds. Unlocks U.S. institutional capital, improves liquidity, and validates company maturation.

This dual-listing strategy balances near-term capital needs with long-term institutional access. TSX-V provides startup-friendly listing requirements and Canadian cleantech investor familiarity, while the Nasdaq path creates a clear value inflection milestone aligned with operational maturation.

PUBLIC CURRENCY ACCELERATES OUR M&A STRATEGY WHILE PROVIDING LIQUIDITY FOR EARLY INVESTORS AND EMPLOYEES. WE'RE BUILDING FOR INSTITUTIONAL-GRADE GOVERNANCE AND DISCLOSURE FROM DAY ONE.

PROPOSED TRANSACTION SUMMARY

Hallor's Public Market Entry and Capital Structure: Hallor Group's public market entry via TSX-V CPC Reverse Takeover will establish a foundational capital structure at a reference price of \$0.15 CAD per share, bolstered by a concurrent financing round.

POST-RTO BASIC CAPITAL TABLE

Shareholder Group	Shares Issued	Issue Price
CPC (Public Shell)	26,000,000	\$0.15
Hallor Operating Shareholders	45,000,000	\$0.15
Concurrent Financing Investors	20,000,000	\$0.15
TOTAL BASIC SHARES OUTSTANDING	91,000,000	

WARRANTS & UPSIDE CAPITAL

Instrument	Shares	Exercise Price
Investor Warrants (1:1)	20,000,000	\$0.20

FULLY DILUTED CAPITAL TABLE (ILLUSTRATIVE)

Category	Shares
Total Basic Shares	91,000,000
Warrants Outstanding	20,000,000
TOTAL FULLY DILUTED SHARES	111,000,000

KEY TAKEAWAYS

CLEAN CPC RESET	TREASURY UPDATE
Entry at \$0.15 CAD per share provides a strong baseline for public market valuation.	Potential \$4.0M CAD additional treasury upside from warrant exercise strengthens future financial capacity.

MEASURABLE CARBON REDUCTION AT SCALE

Hallor's environmental impact isn't abstract virtue signaling, it's quantifiable carbon reduction at industrial scale. Every Green Ox™ unit deployed eliminates tons of CO₂ annually while delivering superior economics.

ESG VALUE PROPOSITION:

- **Zero tailpipe emissions:** Eliminates direct Scope 1 emissions from ICE combustion, immediately improving airport air quality and reducing carbon footprint
- **80% OpEx reduction:** Environmental benefits align with economic benefits—no green premium required for adoption
- **Quantifiable impact:** Each electric baggage tractor prevents ~15 tons of CO₂ annually compared to diesel equivalent
- **ESG procurement alignment:** Helps airports meet net-zero commitments and satisfy institutional investor sustainability mandates
- **Supply chain transparency:** Canadian manufacturing with traceable components supports corporate ESG reporting requirements

Hallor enables airports to demonstrate measurable progress toward climate commitments while improving operational economics—a rare alignment of environmental and financial objectives that drives procurement decisions.

OPEX
REDUCTION

Lower annual operating costs
vs. diesel equipment

EMISSIONS

SAVED

Per electric baggage tractor
vs. ICE baseline

THE CATERPILLAR OF ELECTRIC GSE

Hallor's long-term vision extends beyond individual product categories to becoming the dominant global platform for electric ground support equipment—the "Caterpillar" of aviation electrification.

GLOBAL MANUFACTURING PLATFORM	CANADIAN CLEAN-TECH CHAMPION	BILLION-DOLLAR INFRASTRUCTURE COMPANY
Multi-site production across North America, Europe, and Asia-Pacific. Regional manufacturing reduces logistics costs, improves delivery times, and provides tariff optimization while maintaining design control and quality standards.	Anchor Canadian cleantech success story demonstrating domestic innovation can compete globally. Platform for showcasing Canadian engineering excellence, attracting talent, and supporting government industrial strategy objectives.	Evolution from equipment manufacturer to essential infrastructure provider. Platform business model with hardware, software, and services revenue generating recurring cash flow and compounding network effects as installed base scales.

WE'RE NOT BUILDING A NICHE ELECTRIC VEHICLE COMPANY. WE'RE BUILDING THE INFRASTRUCTURE LAYER THAT ENABLES THE \$175B+ TRANSITION TO ZERO-EMISSION AVIATION GROUND OPERATIONS WORLDWIDE.

Hallor's ambition matches the scale of the market opportunity. The aviation industry's forced electrification creates space for a new category leader. We're positioning to capture that role through superior engineering, strategic M&A, and relentless execution.

A RARE PUBLIC-MARKET CLEAN-TECH OPPORTUNITY

Hallor represents an uncommon convergence of attributes rarely found in early-stage public companies: proven technology, commercial traction, massive addressable market, favourable regulatory tailwinds, and a clear path to Nasdaq listing.

DE-RISKED TECHNOLOGY

TRL-9 equipment operating in live commercial environments, not lab prototypes. Technology validation complete—execution risk focused on scaling, not proving the concept works.

FORCED REPLACEMENT MARKET

Regulatory mandates creating non-discretionary demand. Airports must electrify regardless of economic conditions—insulating business from typical cyclical market exposure.

INSTITUTIONAL-GRADE PATH

TSX-V listing with 30-month Nasdaq uplist roadmap provides clear institutional access progression. Public currency enables M&A strategy while maintaining governance and disclosure standards.

REAL REVENUE TODAY

Actual equipment sales generating cash flow, not projected revenue years in the future. \$25M+ qualified pipeline with active procurement discussions at major airports.

MANUFACTURING PARTNERSHIPS

Tier-1/2 production LOIs in place, avoiding the capital intensity and execution risk of building manufacturing from scratch. Scale through partnerships, not greenfield facilities.

EXPERIENCED LEADERSHIP

Team with 30+ years manufacturing scale-up experience, public company CFO expertise, and deep aviation industry relationships. Operators who've built and sold businesses, not first-time founders.

Most cleantech investments require betting on unproven technology, uncertain markets, or distant commercialization timelines. Hallor offers validation across all three dimensions while maintaining meaningful upside through market capture in a forced-replacement cycle.

This combination of de-risked downside with asymmetric upside rarely exists in public markets at this stage.

LEADERSHIP

**DEAN
KNEIDER**
CEO & BOARD
DIRECTOR

Dean is a 30+ year business veteran operating and growing private and public ventures in the consumer services, development, manufacturing and operational roles.

Having worked for Coca-Cola, Labatt Breweries, Intrawest, and Foster Grant and Global Coffee, Dean has built, led, and achieved strategic growth plans with international reach.

Recently, Dean has passionately started and run the Vancouver-based EV Conversion Company RiiseEV for Classic cars, Buses and Commercial Utility Vehicles - all with gradually increasing deliverables on sustainability and green initiatives, supporting a circular economy.

He has exceptional capabilities in developing, leading and aligning strategy to tactical implementation for achieving company growth. An avid Car enthusiast with a passion for the EV future by preserving the past.

**KEITH
HALSTON**
TECHNICAL
DIRECTOR &
CO-FOUNDER

Over the course of 35+ years as a Millwright/Steel Fabricator while working in the forestry, mining and transportation industries, Keith found his inherent ability to not only solve problems but improve the overall machine.

Keith became a GSE Maintenance Manager for an international airport allowing for an in-depth look at the critical needs and seeing inefficient and expensive gas and diesel equipment that had not seen improvements for decades. Traditional GSE were designed in a way that got the job done but at the expense of high maintenance, high emissions, and above all, operator safety.

Keith’s innovations led to his dedication to designing and building industry-leading and sustainable GSE. As co-founder of Hallor, Keith has developed the Green Ox airport baggage tractor and associated modular systems to provide the GSE industry with safer, carbon-neutral alternatives, and pioneer domestic EV production.

**JAMES
TAYLOR**
TECHNICAL
DIRECTOR &
CO-FOUNDER

40+ years of extensive experience as a heavy-duty mechanic and welder, having rebuilt entire machines including power train components, right down to the brakes. He has applied his knowledge for the last 25 years as self-proprietor, working in the interior of BC, Canada.

Insatiable interest in learning how things worked and solving problems led him to cross paths with Keith Halston. Always working on someone else’s project, it was time to create and build something of his own. Together, they developed an electric tractor for the airport industry long before “go green” became common vernacular.

As co-founder of Hallor, James has been a fundamental supporter of the Green Ox R&D process as well as the development of other electric ground support equipment [GSE] that will set a new standard in the airport industry.

LEADERSHIP

**TERENCE
LEE**
CFO & BOARD
OFFICER

Terence is a Chartered Professional Accountant (CPA) with ten years of progressive finance experience working and servicing companies across various industries including EV, Mining, Technology, and Cannabis.

He obtained his CPA designation while articling with BDO Canada LLP. During his tenure at BDO, Terence was focused primarily on providing audit and assurance services to Canadian public companies.

Terence has significant experience in financial reporting, technical accounting (IFRS), and financial planning and analysis. In 2019, he co-founded Imperium Consulting LLP, a boutique accounting and advisory firm based in downtown Vancouver, BC.

Terence con-currently serves as CFO to a publicly listed cannabis management company and to a British Columbian based private junior resource company.

**CHRISTINA
VAN**
OPERATIONS &
COMMUNICATIONS

Christina has 16+ years in design, marketing, and communications, working in-depth with industries including EV and Charging Infrastructure, Sustainable Tech, Hospitality, and CPG.

Her decade-plus tenure as a marketing agency Partner and Director of Digital Communications has honed Christina’s tools for creating effective processes, data analytics, and results-driven metrics used to evaluate opportunities, both in-bound and out-bound, as well as go-to-market strategies.

Her experienced resilience in facing the challenges of both startups and established businesses during market fluctuation has been crucial in helping other high-potential entrepreneurs find and achieve their paths to success.

Christina works closely with leadership to join key contacts with potential strategic partners, raise capital, strategize company growth, and optimize operations.

**MARK
ORSMOND**
INDUSTRY
SPECIALIST

Mark is an experienced business leader with a proven track record of managing and growing businesses to become global enterprises. For ~3 years, Mark was CFO of the Corix Group of Companies managing a team of over 45 accounting and finance professionals, and overseeing an annual budget of \$2.4B+ and \$1.6B+ debt portfolio. Prior to Corix, Mark was a principal of the All-Sea Group of companies fostering its development into one of the world’s leading underwater high-capacity service companies.

In 2020–2022 Mark was the CFO of Taiga Motors, where he assisted the Company in securing a major \$200M financing for a Canadian SPAC that included Federal and Provincial grants and loans for over \$50M. He joined RiiseEV in 2021 to help launch the company and has most recently been appointed as the CFO of Electra Meccanica, listed on Nasdaq. Mark's insights and passion for the EV industry makes him a valuable strategic asset to Hallor Group.

ADVISORY

**ASHIK
KARIM**

BOARD
CHAIRPERSON

Ashik founded Striven Consulting in 2014 (later becoming a division of Deloitte); 1Shift, the first blockchain platform that manages logistics on blockchain for proof of delivery; and UpCapital Investments Corp, an investment banking group that focuses on scaling early-stage electric vehicle companies worldwide.

Instrumental in the growth of Cellestial, an agricultural electric tractor company with over \$5B USD in annual revenue that eventually sold to Murugappa Group.

Helped Lytehorse Labs, an electric ATV for military and recreational use, grow value, hone in on bringing accretive sales, and achieve an effective go-to-market approach.

Ashik has also played a fundamental role in strategic advisory for two North American EV charging companies.

**KEN
DAVIDSON**

BOARD
DIRECTOR

Ken is an accomplished corporate director, consultant, entrepreneur, Chartered Professional Accountant (CPA) and certified Corporate Director (ICD.D) with over 30 years of experience in a diverse range of industries across Canada, the US, and the Caribbean.

Ken was the former Managing Partner of BDO Atlantic Canada, having also been a long-time partner and served one year as Board Chair for BDO, a year in which the company generated \$500 million in revenue.

As a strategic leader, experienced board chair, board committee member, and director, Ken provides insight and expertise in the areas of corporate strategy, financial risk, governance, enterprise risk, growth strategies, mergers and acquisitions, providing wise counsel on the best paths to take.

**JOHN
PINSENT**

BOARD
DIRECTOR

John’s strong professional accounting and corporate governance background promotes knowledge based businesses. He is active in information, communication and technology (ICT) and biotechnology initiatives and serves on the boards of Capital Roads, Alberta’s A-100 and various other industry initiatives.

John has served as director on a number of public company boards including Enterprise Group Inc. (TSX), Hyduke Energy Services Inc. (TSX) Synodon Inc. (TSX.V), Innovotech Inc. and Liberty Mines Inc. (TSX).

John earned his ICD.D in 2010 and has extensive experience as both the Board and Audit Committee Chair in the organizations that he serves. John also serves on the boards of several private companies including Innovative Trauma Care Inc., Smilesonica Inc., Picomole Inc., and IMBiotechnologies Inc.

**DAMARYS
ZAMPINI**

BOARD
DIRECTOR

Damarys is a strategic, global growth executive, driven by human ingenuity. She works with the future of Energy, Cleantech, Sustainable Exploration, Construction, Digital and non-digital Technologies, aligned to Circular Economy and Smart City. As a CEO of Sustrategy, Damarys builds and implements strategic growth plans for existing & new markets, globally.

Damarys is an Angel Investor, Advisor and deeply involved in the ecosystem of innovative and inclusive solutions that assist in efficiencies, digital/non digital and net zero transformation, with metric driven impact. Damarys has 20+ years of direct experience in oil & gas, all energy & mining including exploration, EPCM & SCM & global logistics, safety, SaaS and new technologies, like AI and blockchain. Continuous learning is a daily practice, as well as giving back via mentorship.

STRATEGIC CAPITAL, EUROPEAN SCALE & M&A LEADERSHIP

STRENGTHENING HALLOR'S BOARD WITH EUROPEAN CAPITAL MARKETS, ACQUISITION EXECUTION, AND ROLLOUT EXPERTISE

ANDRÉ FRAGA

EUROPEAN STRATEGY
& M&A LEADERSHIP

Hallor is adding significant European strategic capability through incoming board member Andre Fraga, whose family office will provide both capital and operational expertise for Continental expansion and M&A execution.

Role & Strategic Value:

- Principal of Fraga Family Office (Italy) with deep European business networks and capital markets relationships
- Will lead European acquisitions, OEM roll-ups, and regional manufacturing partnerships as Hallor expands Continental operations
- Oversees EU airport and aviation infrastructure relationships, providing direct access to procurement decision-makers
- Strategic sponsor for Hallor's European expansion roadmap, bringing local market expertise and deal-sourcing capabilities

Capital Commitment:

- [\$1M CAD] equity investment demonstrating significant financial commitment aligned with Hallor's success
- Investment triggered post-listing, subject to operational and acquisition milestones, ensuring alignment with execution
- Capital specifically allocated to European M&A and rollout execution, not general corporate purposes

WHY THIS MATTERS

LOCAL EUROPEAN DEAL EXECUTION
CAPABILITY AND RELATIONSHIPS
DRAMATICALLY ACCELERATE SHARE-BASED
ACQUISITIONS WITH REGIONAL CREDIBILITY.
FRAGA'S APPOINTMENT POSITIONS HALLOR
TO BECOME A TRULY GLOBAL PLATFORM,
NOT JUST A NORTH AMERICAN OEM
EXPORTING TO EUROPE.

SUMMARY: ELECTRIFYING THE FUTURE OF GSE

Hallor Group stands at the intersection of massive market opportunity, regulatory mandate, and technological readiness. The global aviation industry's forced transition to zero-emission ground operations creates a once-in-a-generation opportunity to build a category-defining company.

THE MARKET OPPORTUNITY IS REAL AND TIME-BOUND

Over 1 million diesel GSE units must be replaced by 2030 to meet airport net-zero mandates—creating non-discretionary demand regardless of economic conditions.

THE TEAM HAS DONE THIS BEFORE

Experienced operators with track records scaling manufacturing businesses and navigating public markets. This isn't a learning exercise.

THE TECHNOLOGY IS PROVEN AND DEPLOYED

TRL-9 validation in live commercial operations eliminates technology risk. We're scaling proven equipment, not hoping prototypes work.

THE PATH TO LIQUIDITY IS CLEAR

TSX-V listing in Q2 2025 with 30-month Nasdaq uplist roadmap provides institutional access while maintaining execution focus.

WE'RE NOT JUST REPLACING GAS AND DIESEL TRACTORS. JOIN US IN BUILDING THE INFRASTRUCTURE PLATFORM THAT POWERS THE NEXT GENERATION OF SUSTAINABLE AVIATION OPERATIONS.

MARCH 2026

HALLOR

THANK YOU.

DEAN KNEIDER
1-604-209-9686

PIPE

Full Interest List of Current Orders in Discussion:

- Conservatively, \$25M potential order book (210+ units; average \$100k/unit) with known current clients.
- This is focused on the small local aviation GSE market.
- Overall combined target sales of \$119M (1,630+ units) over 3 years.
- Based on continuous inventory availability.
- Excludes potential ports, terminals, mining, and agriculture industries.
- Excludes additional revenue streams via conversion kits and telematics.

COMPETITIVE LANDSCAPE

CURRENT PLAYERS

VS. BEST IN CLASS

- HIGH OPERATING EXPENSES (\$30K+/YEAR)
- PREDOMINANTLY GAS AND DIESEL
- ADMINISTRATIVE SAFETY CONTROLS TO MEET LEGISLATED REQUIREMENTS
- CLUNKY OUTDATED DESIGN & UTILIZES OLD TECH
- PREDOMINANTLY NON-MODULAR DESIGN & HIGHER INVENTORY REQUIREMENTS
- TARIFF IMPACTED PRODUCTION & IMPORT
- COMPETING WITH EACH OTHER FOR SAME SUPPLY CHAIN VENDORS
- HIGH CENTER OF GRAVITY & EASY TO TIP
- INEFFICIENT OR NON-FUNCTIONAL IN EXTREME TEMPERATURES
- REAR-WHEEL DRIVE ONLY

- VS. 80% LESS ANNUAL OPERATING EXPENSES
- VS. ZERO EMISSIONS USING CLEAN ENERGY
- VS. ENGINEERED SAFETY CONTROLS TO EXCEED LEGISLATED REQUIREMENTS
- VS. DESIGNED FOR COMFORT & ANTI-FATIGUE
- VS. MODULAR CHASSIS DESIGN FOR FULL FLEET COMMONALITY
- VS. CANADIAN PRODUCTION WITH CONNECTIONS FOR U.S. EXPANSION
- VS. ROBUST SUPPLY CHAIN ACCESS AND RELATIONSHIPS
- VS. LOWEST CENTER OF GRAVITY & HARDER TO TIP THAN A MILITARY HUMVEE
- VS. ALL-WEATHER TESTING FROM +50°C TO -47°C (122°F TO -52°F)
- VS. FRONT-WHEEL DRIVE FOR UNMATCHED CONTROL

MITSUBISHI HC CANADA OFFICIAL LEASING PARTNER

LEASING ADVANTAGES

Leasing allows new electric additions to customer GSE fleets without needing to shoulder the cost of paying everything up front.

- Keeps monthly cashflow predictable with consistent low payments
- All-electric capabilities at a comparable cost to gas/diesel units
- Buy new + electric and saves on OpEx
- Competitive rates
